Hex Shank Wood Auger Bit

Hexagon shank wood augers incorporate ground and sharpened combination cutting edges that produce fast, clean and accurate holes.

Precision ground back tapered flute prevents drill from jamming in holes and provides easy tool removal.

Thin body core with deep flutes allows greater removal of wood chips.

The 'In Flute' is steam tempered to provide a smooth finish which allows rapid removal of wood chips and faster drilling.

Precision machined 'spur' scores the outline of the hole into the wood, helping the bit to stay true and produce clean holes with minimal break through.

Screw tip pulls the auger through the wood for added ease of use and minimal user effort.

Wood Augers can be used in:

Hardwoods
Softwoods
Veneered chipboard
Plywood
Chipboard

Technical Specification	
25mm Diameter	160mm Working Length 235mm Overall Length
